National Synchrotron Light Source II. NSLS-II is a state-of-the-art 3 GeV electron storage ring. The facility offers scientific and industrial researchers an array of beamlines with x-ray, ultraviolet, and infrared light to enable discoveries in clean and affordable energy, high-temperature superconductivity, molecular electronics, and more.

BNL | National Synchrotron Light Source II (NSLS-II)

A synchrotron light source is a source of electromagnetic radiation (EM) usually produced by a storage ring, for scientific and technical purposes. First observed in synchrotrons, synchrotron light is now produced by storage rings and other specialized particle accelerators, typically accelerating electrons. Once the high-energy electron beam has been generated, it is directed into auxiliary ...

In particle accelerators the beamline is usually housed in a tunnel and/or underground, cased inside a concrete housing. The beamline is usually a cylindrical metal pipe, typically called a beam pipe, and/or a drift tube, evacuated to a high vacuum so there are few gas molecules in the path for the beam of accelerated particles to hit, which would scatter them before they reach their destination.

An Introduction to X-ray Powder Diffraction Analysis. When a beam of X-rays illuminates a single crystal, many â€œspotsâ€• are generated. The positions of the spots are determined by the size and shape of the unit cell and the symmetry.

A series of ultrathin InSb films grown on GaAs by low-pressure metalorganic chemical vapor deposition with different V/III ratios were investigated thoroughly using spectroscopic ellipsometry (SE), X-ray diffraction, and synchrotron radiation X-ray absorption spectroscopy. The results predicted that InSb films on GaAs grown under too high or too low V/III ratios are with poor quality, while ...

Abstract. The coupling of electron channeling contrast imaging (ECCI) with EBSD provides an efficient and fast approach to perform ECCI of crystal defects, such as dislocations, cells, and stacking faults, under controlled diffraction conditions with enhanced contrast. From a technical point of view, the ECCI technique complements two of the main electron microscopy techniques, namely, EBSD ...

Welcome to the first national meeting of the Swedish Chemical Society! The meeting brings together more than 450 persons from all directions of chemistry represented within the society and offers a program of top plenary lectures, exciting specialized parallel sessions and plenty of room for interactions with meeting participants and exhibitors between scientific sessions.
