

marine faunal diversity in pdf

Biodiversity is not evenly distributed, rather it varies greatly across the globe as well as within regions. Among other factors, the diversity of all living things depends on temperature, precipitation, altitude, soils, geography and the presence of other species. The study of the spatial distribution of organisms, species and ecosystems, is the science of biogeography.

Biodiversity - Wikipedia

The Great American Interchange was an important late Cenozoic paleogeographic event in which land and freshwater fauna migrated from North America via Central America to South America and vice versa, as the volcanic Isthmus of Panama rose up from the sea floor and bridged the formerly separated continents. Although there were earlier dispersals, probably over water, the migration accelerated ...

Diagenetic and burial processes transform biolipids to fossil lipids, or hydrocarbon biomarkers, through

complex pathways that include oxidation, reduction and cyclization (Briggs and Summons, 2014). These transformations are commonly related to ambient conditions in the early diagenetic environment, i.e. the setting in which organic geochemical reactions proceed most rapidly.
