Investigation Of Corrosion-Influencing Factors In

Cathodic protection (CP) is a technique used to control the corrosion of a metal surface by making it the cathode of an electrochemical cell. A simple method of protection connects the metal to be protected to a more easily corroded "sacrificial metal" to act as the anode. The sacrificial metal then corrodes instead of the protected metal.

Cathodic protection - Wikipedia

The data values of standard electrode potentials are given in the table below, in volts relative to the standard hydrogen electrode, and are for the following conditions: . A temperature of 298.15 K (25.00 °C; 77.00 °F). An effective concentration of 1 mol/L for each aqueous species or a species in a mercury amalgam (an alloy

of mercury with another metal).
