## **how to calculate Overall Equipment Effectiveness (OEE)**

Overall equipment effectiveness (OEE) is a term coined by Seiichi Nakajima in the 1960s to evaluate how effectively a manufacturing operation is utilized. It is based on the Harrington Emerson way of thinking regarding labor efficiency. [citation needed] The results are stated in a generic form which allows comparison between manufacturing units in differing industries.

## **Overall equipment effectiveness - Wikipedia**

OEE Formula . Your OEE calculation is based on a composite of the six big losses of your equipment broken down into three main areas; Availability, performance and quality.

## **OEE Calculation | Lean Manufacturing Tools**

1. Obtain Minimum 90% OEE (Overall Equipment Effectiveness) 2. Run the machines even during lunch. (Lunch is for operators and not for machines!)

## **An Introduction to Total Productive Maintenance (TPM)**

Jyoti "Reducing the resources necessary to produce value is the ultimate goal of kaizen. The takt time / cycle time calculation tells you what you MUST have to do the job as it is currently done. If you don't like what the math tells you, then set a target objective (what cycle time do you NEED?) then apply kaizen / problem solving to hit that target.
